

FOG SATURATION SANITIZING UNIT

JET FOGGER

IDEAL FOR ANY ENVIRONMENT

- VEHICLES
- SHOPS
- SPORTS CENTERS
- WORKSHOPS
- HOTELS
- STORES
- HOSPITALS

QUICK DISINFECTION

JET FOGGER is a rapid disinfection tool capable of quickly covering large sizes and surfaces. Traditional disinfection methods have a limited effect and do not guarantee the total elimination of contaminants.

HOW DOES IT WORKS?

JET FOGGER quickly spreads a “dry mist” into the environment by atomizing the mixture of water and disinfectant biocidal agent (hydrogen peroxide).

The aerosol spreads rapidly in the environment on every cm² of free surface present in the environment and for each volume of air, without generating humidity, corrosion and residues.

This solution, called “NO TOUCH”, reduces microbial and virus charges 1 million times more effectively than traditional spraying or rubbing methods. Huge quantities of micro particles with sizes including <5 microns atomized with special supersonic air nozzles exponentially increase the contact surface by amplifying the disinfection effect and reducing the consumption of disinfectant and contact times.

HIGHLY EFFECTIVE AGAINST VIRUSES, BACTERIA, MOLDS AND SPORES.

The radicals released by the peroxide degrade DNA, RNA and bacterial and viral proteins. The small size of the disinfectant compounds increases the nucleation effect at the cytoplasm level of micro organisms.

The rapid decomposition of the OH- radicals into H₂O and O₂ makes the hydrogen peroxide used non-toxic, does not generate the formation of Volatile Organic Compounds and its degradation is rapid (greater than 99.99% in about 15 minutes).

- **1 m³ PER SECOND (500 m³ in about 8 minutes)**
- **NO RESIDUE**
- **ENVIRONMENT USABLE AFTER ONLY 15 MINUTES**
